IRC Structural Insights

Two-day workshop for Home Builders and Sub Contractors, Home Designers, Plans Examiners, and Building Inspectors

With a focus on wood construction, the course addresses floor, wall and roof assemblies, common footing and foundation issues, and how to recognize alternate acceptable methods versus problems requiring modification in residential construction.

Also addressed are wind loads and their impact on building systems, especially bracing, wall and roof cladding. Deck construction options are considered. Examples selecting floor, roof and wall systems are covered as a group and individually for one- and two-story residential structures.

The instructor will be Sandra Hyde, P.E., ICC Managing Director of Product Development.

CEU's will be available for those that need them.....

Day 1: Foundations and floors (some walls may be covered this day as well)
Day 2: Walls and roofs

Upon completion of this seminar, participants will be better able to:

- Understand fundamental structural provisions of the 2018 IRC.
- Discuss topics related to wood construction.
- Address foundation, floor, wall and roof assembly issues.
- Identify acceptable alternate methods of code compliance.
- Address wind loads on wall and roof assemblies
- Identify structural members for 2-story residential example
- Understand prescriptive wall bracing.
